Simple and Secure Record-Keeping for the Trucking Industry

The Federal Motor Carrier Safety Administration of the U. S. Department of Transportation requires all carriers to satisfy their record-keeping requirements, including archiving various documents for terms of one to three years. This includes ELD, UCR, IFTA, DVIR Forms, Load Sheets and Miles Reports.

Achieving these requirements, however important, are prone to human error and both space and time consuming. We provide technology to address these issues and provide an environment to scan, store, archive and search these important documents with the minimum amount of human intervention. Time and Costs are saved by reduced handling of documents, not having to sort supported paperwork, manually index scanned images or calculate destruction dates.

No sorting required

Sorting is not required for supported documents, just scan them into your secure input folder. Our solution uses every bit of available information to intelligently identify documents and detect document boundaries.

Everything in one place

We connect content such as documents, emails, customer details, order numbers, and project info, even if it is saved in different archives or systems.

A full context for your work

All contracts expiring next month, all documents for a given project, all correspondence with a customer. You get the full picture on the topic you are interested in.

One copy, no uncertainty

Forget duplicates, we store one copy for each document instead. Never again will you have to wonder if you are working with the most recent version.

We take care of the rest

We make sure documents go through their workflows, follow appropriate retention policy, and that documents are accessed only by those with the right permissions.

Document Retrieval

All documents will be retrievable by both assigned metadata and full text searches, from anywhere there is internet access.
